## LOCATION

North America, Work From Home

## OUR COMPANY

Liventus is a full-service business technology solutions company. We offer dedicated teams of full-time developers, designers, marketing professionals, network managers, and business consultants. We have created and managed, from the ground-up, dozens of eCommerce sites that generate tens of millions of dollars annually. We have created and implemented CRM Systems, paperless office systems, purchase order systems, 3D imaging tools, and customer service applications. We have done work and continue to manage applications for companies like Tag Heuer, daVinci Prepaid, Glentronics, Relay Health, NOW Foods, Good Feet Worldwide, Broadway Direct, and more.
## POSITION DESCRIPTION

We are looking for a detailed and motivated person to grow within our organization who has knowledge of and exposure to web application development using languages such as C#, Angular or React, and other related technologies used to implement web-based applications. Candidate must be able to work in a team setting, follow agile development, and must have strong database, analytical, and conceptual skills.

## RESPONSIBILITIES

- Work with team members to develop web applications based on Microsoft .Net, SQL Server, Angular, jQuery and other related technologies. Provide software development life cycle support, including conduct of technical requirements analysis, design, development, performance measurement, verification and validation, deployment, change management, and transition. Configure, debug, test, and document new applications and enhancements, including but not limited to forms, reports, underlying logic, and interface components on development projects as assigned. Work as a point of contact from the development team for other non-technical teams like marketing, accounting, graphic designing and customer support. Work in a disjoint team environment spread out in multiple time zones using agile development processes and deliver work on time and within budget. Follow up with issues in an efficient manner, including working hand-in-hand with Quality Assurance, Project Management, and/or senior developers. Regularly communicate project progress, issues, and risks to team and managers. Regularly learn and adapt to new languages and technologies. Be client-facing and regularly communicate with product owners.

## REQUIREMENTS

- Minimum one year of prior work experience in programming or related field. Have good understanding and exposure to web application development. Have good understanding and exposure to Microsoft .NET, C#, Angular or React. Possess good communication skills. Completed a minimum of a four-year related or advanced degree in a related field.
